

BENEFITS OF PRINTER UNIT MAINTENANCE

Maintaining the printer units is essential for ensuring your flexographic printer performs at its highest level.

Avoid the three most common problems arising from using the machine, such as:

01

Vibrations that cause colour tone variations (banding) due to the unit instability.

02

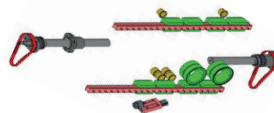

Increasing job setup time.

03

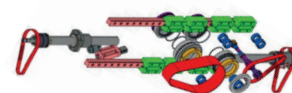

Unexpected machine downtime due to broken mechanical parts and a significant drop in production as damaged parts are replaced.

With the recommended maintenance, we ensure:

- ✓ An improvement in the quality of the printed product.
- ✓ Increased printing speed and 15% increased production based on certain jobs according to prior auditing)

Transmission side

Do you want to increase the printing speed even more?

Combine this maintenance with the "Pipeless" doctor blades retrofitting. The system gains in robustness and reaches much faster printing speeds even higher than those of the original machine.
