

Technical course

Offset printing for flexible packaging

The training provides a comprehensive overview of the offset process in CI (central impression) printing as applied to flexible packaging and labeling, covering everything from job preparation to printing and sample analysis.

This enables participants to understand how their daily tasks fit into the overall process, fostering better communication and teamwork within the plant. Additionally, the visit to Comexi's facilities and the course introduction help contextualize the knowledge and allow participants to become familiar with the real technological environment.

November 17-18, 2026

Comexi facilities. Av. Mas Pins, 135. E-17457 Riudellots de la Selva.
Girona. Spain
